1.3
M.Sc. Global Public Health, TH Deggendorf (German scale)

B.Sc.
Medical Laboratory Sciences incl. hospital internship

7,000+
blood donations documented in the laboratory information system

ICH-GCP
certified in Good Clinical Practice (University of Oxford network)

WHAT I BRING TO TELEPAXX

Medicine, digital health and structured work in one profile

Project Management
Coordinating medical congresses and healthcare projects across the full project cycle, with physicians, medical societies, service providers and internal teams. Project lead of a practice project in my Master's.

Business Development
Market and competitor analyses, contributions to offers, bids and tenders, improved acquisition documents, and a LinkedIn campaign with weekly KPI tracking.

Quality Management
Lab work under SOPs in a regulated medical setting: documenting deviations, supporting internal audits, ensuring complete and traceable data. ICH-GCP certified.

Digital health was the **core of my Master's**: courses in Digital Health and Technology for Global Public Health, a paper on the **ethics of the electronic patient record (ePA)**, and a thesis on how insured people use health insurance apps, the main gateway to the ePA.

MCN MEDIZINISCHE CONGRESSORGANISATION NÜRNBERG

Process optimisation: making workflows more efficient and digital

1 · Analyse
processes and communication flows in the team

2 · Document
record workflows, find improvement potential

3 · Improve
put concrete solutions in place

4 · Digitalise
AI tools, Teams & SharePoint

- Member of the business process optimisation team
- Digital transformation project: process optimisation with AI and a digital marketing campaign
- Introduced AI-supported tools in the team

- Improved acquisition documents and documentation processes
- Set up and manage Teams and SharePoint spaces for structured digital collaboration
- Project, cost and performance data in Excel analyses and KPI reports for project leads

BUSINESS DEVELOPMENT · MCN

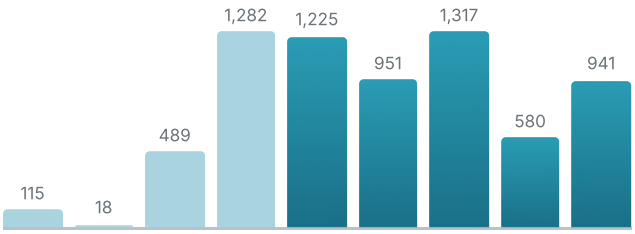

LinkedIn campaign “MCN Sichtbarkeit” (visibility)

6,918
organic impressions

24%
engagement rate (company page average approx. 5%)

+139%
impressions after campaign start (2,039 → 4,879)

€0
ad budget, 19 posts

Weekly impressions · dark = after campaign start

- Planned the campaign, created the posts and analysed results every week
- Presented the results in a report to management
- Clicks grew from 170 to 1,211
- Set up company LinkedIn pages, designed brochures and flyers (InDesign, AI tools)

Source: LinkedIn page analytics · Benchmark: Socialinsider

Business development & customers

- Market and competitor analyses in business development (MCN)
- Contributed to offers, bids and tenders
- Market and customer analyses in retail: needs, demand and trends (Ace & Tate)
- Direct customer care; solved complex requests with internal teams

Project management

- Several parallel projects: tasks, deadlines, milestones, schedules
- Daily alignment with physicians, medical societies, sponsors and providers
- Project lead of a public health practice project (structure, timeline, team tasks)
- Scrum, Kanban, Gantt · Zenkit, Asana

QUALITY MANAGEMENT

Working precisely in a regulated medical environment

Iranian Blood Transfusion Organization

- Worked according to SOPs with direct impact on patient safety
- Recorded and maintained data for 7,000+ blood donations: complete, accurate, traceable
- Identified and documented deviations; supported internal audits
- Regular training on blood and donor safety and quality processes

Gela Dairy Co. · Quality control

- Checked quality data against defined specifications
- Investigated and documented process deviations
- Aligned corrective actions with departments and reported to management

MASTER'S THESIS · M.SC. GLOBAL PUBLIC HEALTH

How people use digital health services in Germany

Understanding user interaction with health insurance apps in Germany: drivers and barriers among 20- to 40-year-olds · online survey, N = 98 · Technology Acceptance Model plus trust and privacy

> The health insurance app is the front door to the electronic patient record (ePA), but it is used rarely and almost only for admin tasks. The biggest barrier is missing information, not data privacy.

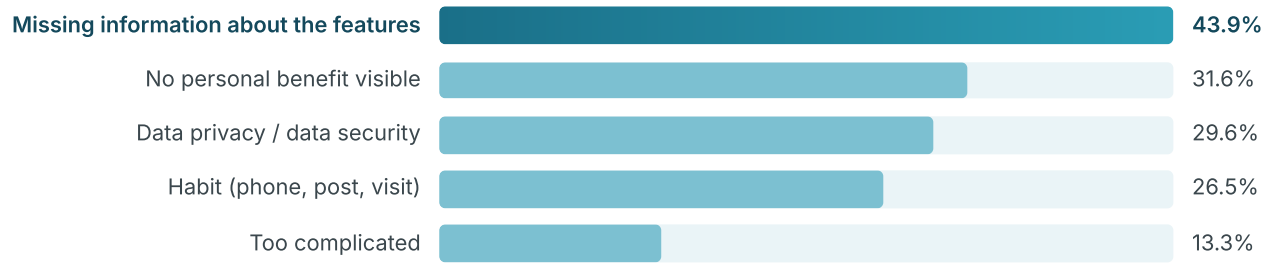

69.4%
have tried their health insurer's app

77.9%
of users open it only a few times a year or less

17.6%
of users have used medical records / ePA

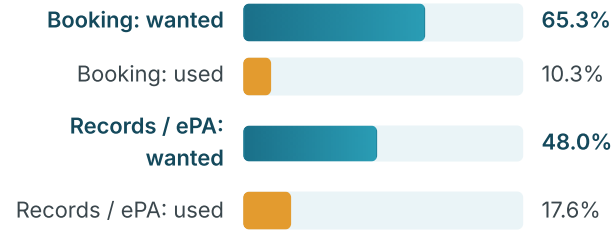

65.3%
want direct appointment booking in the app

The biggest barrier is information, not privacy

Top 5 barriers to more frequent use, % of all respondents (N = 98, multiple answers)

Wanted vs. used

Wanted: all respondents (N = 98) · used: app users (n = 68)

Trust in how data is handled

Mean ratings on a 1–5 scale · people who use digital health services trust them more than those who only imagine them

STUDIES & CERTIFICATES

Digital health, healthcare management and quality

Digital Health · Technology for Global Public Health · Health Law & Ethics: paper on the ethics of the ePA · Knowledge Based Systems (SQL, Python, automation) · Project Management · Managed Care · Statutory Health Insurance · Healthcare Management · ICH Good Clinical Practice (GCP) · Leading Healthcare Quality and Safety · Business Analysis & Process Management (BPMN 2.0) · Agile Project Management (Google) · Analyzing Data with Excel (IBM)

Survey: convenience sample, self-reported data, small subgroups; results are descriptive and exploratory.
